

# ENSURE

## FORCEPS FOR SAFE COAGULATION

MICRO-TECH ENSURE Coagulation Forceps are designed to assist physicians in effectively coagulating bleeding sites during interventional endoscopic procedures. They allow the user to securely grasp vessels and cut or coagulate them using high-frequency current. Bleeding vessels can be reliably staunched during and after endoscopic submucosal dissection, without harming the surrounding tissue. This is ensured by the

well-grooved jaws of the forceps. They ensure a secure grip and prevent slippage during coagulation. Thanks to the maximum opening width of up to 6.3 mm, even large lesions can be coagulated. Precise and comfortable operation is ensured by the ergonomic handle, which enables reliable rotation of the forceps. In addition, the bidirectional connection port ensures more comfortable handling during the procedure.

## SPECIFIC CHARACTERISTICS

- For effective hemostasis during ESD and EMR
- Secure, non-slip hold
- Reliable rotation
- 360° bidirectional rotation of the connection port
- Opening width 6.3 mm

Ergonomic 3-ring handle with soft grip and 360° coagulation connection

## SPECIFICATIONS

REF	Opening width mm	Length mm	Branch	Exterior diameter of distal tips mm	Working channel Ø mm
<b>TYPE B</b>					
CF165-B	6.3	1650	grooved	≤ 2.7	≥ 2.8
CF230-B	6.3	2300	grooved	≤ 2.7	≥ 2.8

Packaging unit: 10 pieces
